Some of the key trends in the home, in line with consumer behavior changes during the pandemic, are hygiene and cleanliness, as well as a desire for more usable space in the home. Builders and designers are incorporating touchless technology, such as automatic doors and faucets, to help facilitate safe entry and exit. Additionally, there is a renewed focus on the mudroom area, with many homeowners adding or expanding these spaces to serve as a transition area between the exterior and the interior of the home. This area can be used for the storage of outdoor shoes, jackets, and other items, as well as a place for washing and sanitizing before entering the home.

The use of materials that are easy to clean and disinfect is also gaining popularity. This includes materials such as stainless steel and glass, which are durable and can be easily sanitized. Homeowners are also looking to incorporate more natural materials, such as wood and stone, which are naturally resistant to bacteria and mold.

Another trend is the incorporation of wellness features into the home. This includes the use of technologies such as air purification systems and touchless thermostats, as well as the addition of amenities such as saunas and steam rooms.

The design of the home is also taking into account the needs of multi-generational living. This includes the creation of private spaces for each family member, as well as the incorporation of flexible designs that can easily adapt to changing needs. The entryway is a key area for this, as it serves as a transitional space between the public and private realms of the home.

The use of technology is also a key factor in the design of the entryway. This includes the use of smart locks and keyless entry systems, as well as the incorporation of advanced security features to ensure privacy and safety.

In conclusion, the entryway is a critical area for the design of the modern home, as it serves as a gateway to the home and sets the tone for the rest of the space. Homeowners are looking to incorporate a variety of features and technologies into this area to create a space that is both functional and stylish.
