

AdventHealth Case Study

In February 2019, AdventHealth Connerton added 9 UVZone Shoe Sanitizing Stations to reduce the spread of harmful germs throughout their facility.

Between February 2019 and March 2020, the stations, in conjunction with existing infection control measures, decreased the microbial load in their facility, resulting in a **53% drop in Hospital Associated Infections (HAIs)**.

"The safety of our patients is our number one priority, and we are committed to having the most advanced technology to deliver the best care possible.

These sanitizing stations allow us to establish new protocols that proactively prevent infections to ensure the best possible outcomes for patients while they're in our care."

--Debi Martoccio, Vice President and Chief Operating Officer at AdventHealth Connerton

Case Study: Lone Star Dairy Products

Lone Star Dairy Products adopted UVZone technology in late 2020.

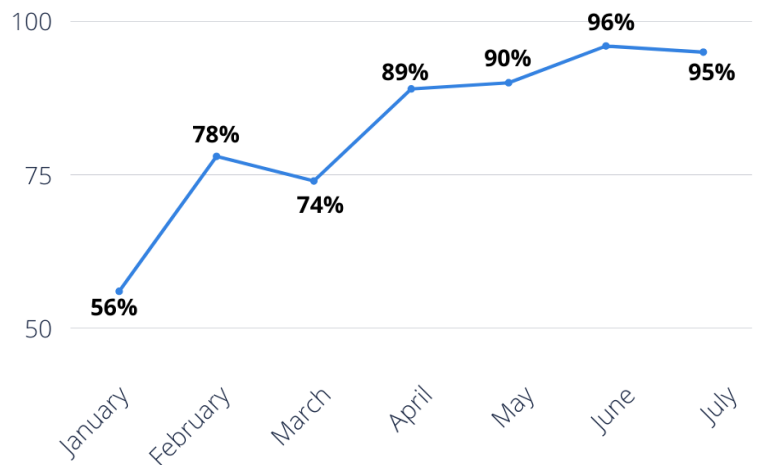

"Lone Star Dairy Products takes the health of our colleagues and the safety of our products very seriously. The UVZone Shoe Sanitizing Stations when strategically placed at our Canyon, Texas facility not only provide a visual sign of safety but have helped drive measurable compliance in other activities like hand washing, taking our culture of hygiene to new levels."

- Dave Soler, Continuous Improvement Manager, LSDP

Hygiene Compliance, Lone Star Dairy Products, 2021

The hygiene compliance at LSDP went up from 56% in January 2021 to 95% in July 2021. This includes hand washing, footwear sanitizing and properly donning protective Tyvek suits.

You will notice in the graph that in March, when the Shoe Sanitizing Station was temporarily removed, their compliance rate dropped from 78% to 74%. Once the Shoe Sanitizing Station was replaced, compliance rose again.
